BIOSOLIDS COMPOST:

Information about GroCo

Ecology.

Where can I get GroCo? **GroCo** is located at Sawdust Supply at 6314-7th Ave South, Seattle, WA 98108. Call (206-622-5141) to find out other distribution locations near you.

GroCo comes bagged or in bulk and you can pick it up or have it delivered.

What is GroCo?

GroCo is a composted mixture of 3 parts sawdust to 1 part biosolids. It is a safe, effective soil amendment and mulch. The King County Wastewater Treatment Division provides the essential ingredient - biosolids.

What are biosolids?

Biosolids are nutrient-rich organic solids that result from treating wastewater. They can be beneficially recycled in many ways.

FOR MORE INFORMATION:

King County Biosolids Program: Check our Web site at www.kingcounty.gov/biosolids or call 206-684-1247.

Biosolids are recyclable because they contain many plant nutrients (such as nitrogen, sulfur, magnesium, phosphorus, zinc and potassium) that stimulate healthy growth in plants and trees.

Like other commercial composts, GroCo is produced in compliance with strict state regulations. Each batch of GroCo compost is tested for metals and pathogens to assure the highest quality and safety before sale to the public.

Pathogens have been destroyed in GroCo.

Many people ask if GroCo compost has a high level of pathogens - disease-causing organisms. The fact is that composting is a well-accepted and natural method to eliminate pathogens. The composting process kills pathogens with high temperatures over a specified amount of time.

(Continued on back)

GroCo consistently earns the highest safety rating, "Exceptional Quality" from the United States Environmental Protection Agency

and meets the Highest Quality Standard of the Washington

Department of

Department of Natural Resources and Parks Wastewater Treatment Division

How can I use GroCo?

As a soil conditioner:

- Loosen existing soil; spread GroCo 1 inch to 3 inches deep on the area you will be planting, then till or spade into the soil.
- For individual planting of your shrubs and trees, mix GroCo halfand-half with existing soil.

As a lawn conditioner:

• Spread up to 1 inch of GroCo over your lawn in early spring or fall.

Container gardens use GroCo too.

GroCo works in window boxes and potted plants as well as on lawns and gardens. The balanced pH in GroCo releases necessary nutrients for healthy plant growth, and its texture provides the aeration plant roots need. Combine equal parts of GroCo with sandy loam soils for a potted plant or window box mixture.

GroCo meets the high quality standards for composts.

Laboratory analyses show that the amount of trace metals in GroCo is extremely low compared to quality limits set by Washington State for composts. Compost that meets these limits may be safely used for all landscaping and home gardening.

Alternate formats available 206-296-8361 or 711 (TTY)

GroCo metals compared to/State limits for metals (in parts per million dry)

Metals	GroCo	Washington Compost Limits
Arsenic	2	20
Cadmium	1	10
Copper	136	750
Lead	19	150
Mercury	0.38	8
Molybdenum	3	9
Nickel	8	210
Selenium	2.3	18
Zinc	261	1400

GroCo: Call 206-622-5141 to find out the cost and where and how to purchase.

What you can do to keep biosolids and wastewater recyclable:

King County processes our wastewater to produce biosolids, recycled water and energy. Please throw trash, fruit and vegetable stickers, pills etc. in the garbage, not down your sinks, drains or toilet. Check our site at www.kingcounty.gov/environment/wtd/Education/ThingsYouCanDo/HowtoGetRid.aspx for tips on how to safely dispose of almost everything.
